### **Non-Covered Surgical Dressings**

Surgical Dressings Benefits-Simple wounds are not covered. These include the following wounds:

- ⇒ Stage 1 pressure ulcer
- ⇒ First degree burn
- ⇒ Wounds caused by trauma not requiring surgical closure or debridement
  - e.g., skin tear, abrasion, venipuncture, or arterial puncture site (e.g., blood sample), other than the site of an indwelling catheter or needle

Medicare covers primary or secondary surgical dressings:

- ⇒ When used to protect or treat a wound
- ⇒ If medically necessary after a wound is debrided

It is imperative that you do the following:

- ⇒ Include clinical information in patients' medical records that demonstrates a reasonable and necessary need for the type and quantity of surgical dressings
- ⇒ Evaluate the wound monthly in most cases and update the record, unless you document why you cannot do a monthly evaluation and how you are monitoring the patient's ongoing use of dressings
